

AT ONE CANCER CENTER, ELITE MATHEMATICIANS ARE SOLVING FAR MORE THAN MATH PROBLEMS.

You won't find any test tubes in Moffitt's Integrated Mathematical Oncology program. Only a large chalkboard and unlimited brainpower. Here, researchers adapt mathematical models to the biological mechanics of cancer in order to better understand and even predict its behavior – which leads to new treatments. The program is the first of its kind in the country, and yet another sign of our leadership in Florida.
